Team Details

a. Team name: Samurai
b. Team leader: pending portal confirmation
c. Problem: founder work loses context and evidence

Note: Please download this template to make your edits and submit the final version.

To download, go to File > Download > Microsoft PowerPoint (.PPTX).Kindly refrain from sending edit requests.

Brief about the idea

One founder workspace for turning an idea into research, a reviewable offer, and a delivery plan.

Samurai retains company context, sources, decisions, and artifacts across stages.

The founder reviews the next decision. Missing or conflicting evidence remains visible.

Opportunities

A connected workflow: specialists share revisioned company context instead of producing isolated answers.

Evidence before confidence: source adjudication checks cited content; unsupported claims stay unverified.

Founder control: accepted stages persist, and consequential external actions require approval.

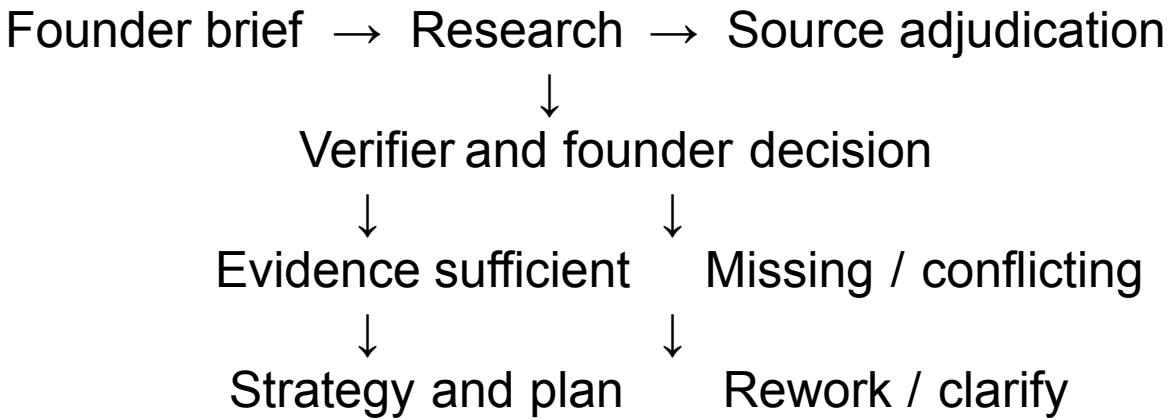

List of features offered by the solution

Locally accepted
Workspace membership • company revision fencing • quotas and files
Founder context • offer diagnostics • scoped knowledge
Explicit learning • bounded schedules • synthetic scenarios

Reliability
One automatic retry • duplicate-write protection • cancellation

These local results do not establish current cloud deployment.

Process flow diagram or Use-case diagram

Accepted stages and their provenance persist; interrupted work resumes under revision and attempt fences.

Wireframes/Mock diagrams of the proposed solution (optional)

The implemented founder workspace is shown on slide 11.

It combines conversation, company context, and typed business panels. Views distinguish assumptions, supported claims, and synthetic calculations.

This draft uses an accepted local fixture capture, not a live customer or cloud demonstration.

Architecture diagram of the proposed solution

Founder UI (React/Vite)

↓

Server proxy: identity and allowlisted routes

↓

Agno AgentOS: parent + explicit workflows + verifier

↓ ↓

PostgreSQL company state, jobs

Gemini reasoning Researcher-only Search

Agno ↔ Redis: events and cancellation

Local files today. Shared cloud coordination rollout is deferred; Cloud Storage is a future adapter.

Technologies to be used in the solution

Python + Agno AgentOS: explicit staged workflows and persistence
Gemini: bounded reasoning; native Search for Researcher only
PostgreSQL: canonical company state, artifacts, and durable jobs
Redis: local coordination for recovery and cancellation
React/Vite + TypeScript: typed founder views and server proxy

Historical Google deployment: Cloud Run, Cloud SQL, and IAP.
The current local candidate has not been deployed.

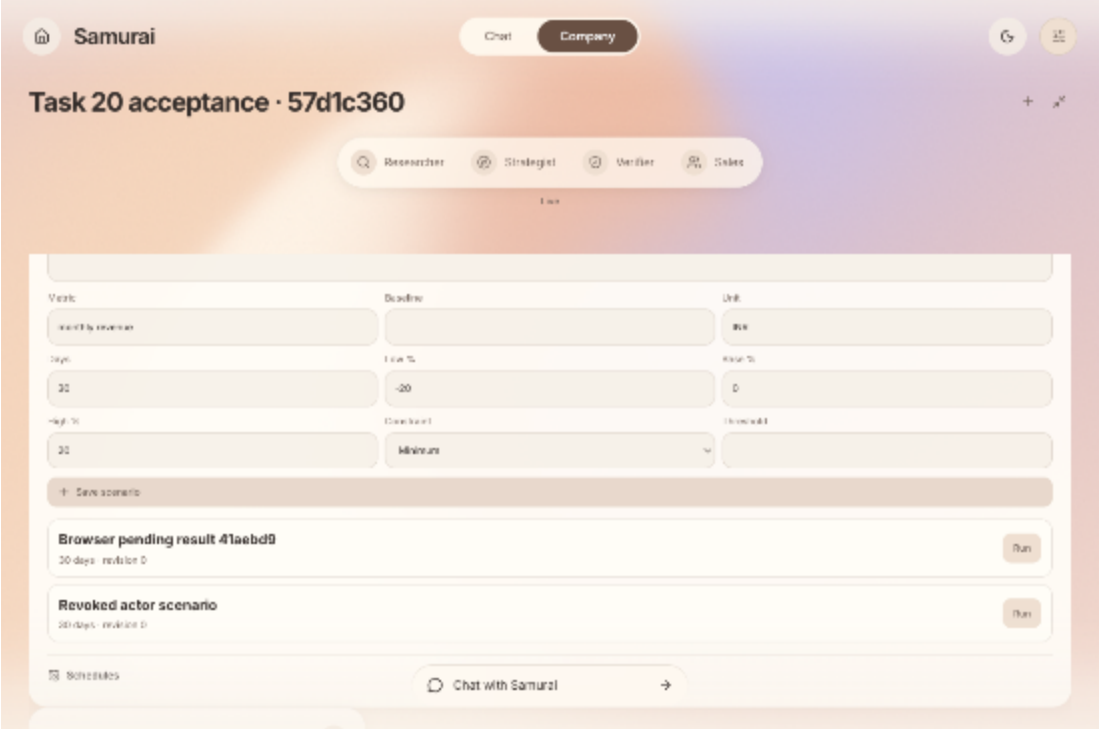

Estimated implementation cost (optional)

Cost controls
Bounded attempts, company admission, quotas, and test fixtures
Provider-free local acceptance; no new Gemini spend in these checks

Paid cloud recovery upgrade: deferred by the founder
Current spend and an approved recurring budget: not established

Hosting estimates require a refreshed inventory and authorization.
No claim of zero-cost hosting or a guaranteed spending cap.

Snapshots of the prototype

Accepted Task 20 local fixture capture; visible “Live” is the UI mode, not cloud deployment or real business data.

Prototype Performance report/Benchmarking

Correctness checks at the accepted local production tree
554 backend tests • 150 frontend tests
60 server tests • 4 Sites tests • 40 provider-free evaluations

Observed recovery
One scheduled result; no duplicate receipt on replay
Stable company and result hashes after backend restart and reload

Latency, throughput, cost per task, and business impact: unmeasured.

Additional Details/Future Development (if any)

Before a production-readiness claim
Complete final integrated manual QA and local integration
Authorize and verify cloud queue rollout and isolated restore drill
Run bounded live source-supported business acceptance

Future work
Cloud Storage adapter and connected business measurements

No outreach, publishing, spending, or demand validation is implied.

Prototype and submission links

Repository: OveRide-Phoenix/team-samurai
Public visibility and final all-ref review: pending authorization

Demo video: not yet recorded or published

Product: restricted Google sign-in; evaluator access pending
Current deployment revision and public links require verification

DRAFT — not ready to submit
